Participation in Dual Enrollment Across California Counties

As described in *A Rising Tide*, student participation in dual enrollment has been growing steadily over the last four years. Yet, participation varies across racial/ethnic subgroups and special populations of students. This online appendix reports the variation that also exists across California's 58 counties. For each county, we provide the rate of dual enrollment participation overall in the last four years and depict the differences in participation rates for the four largest racial/ethnic subgroups (Asian, Black, Latinx and White) and for subgroups of socioeconomically disadvantaged students, English learners, students with disabilities, foster youth, and homeless students. In some county-level graphs, student subgroups are omitted due to cell size restrictions for reporting on subgroups with few students.

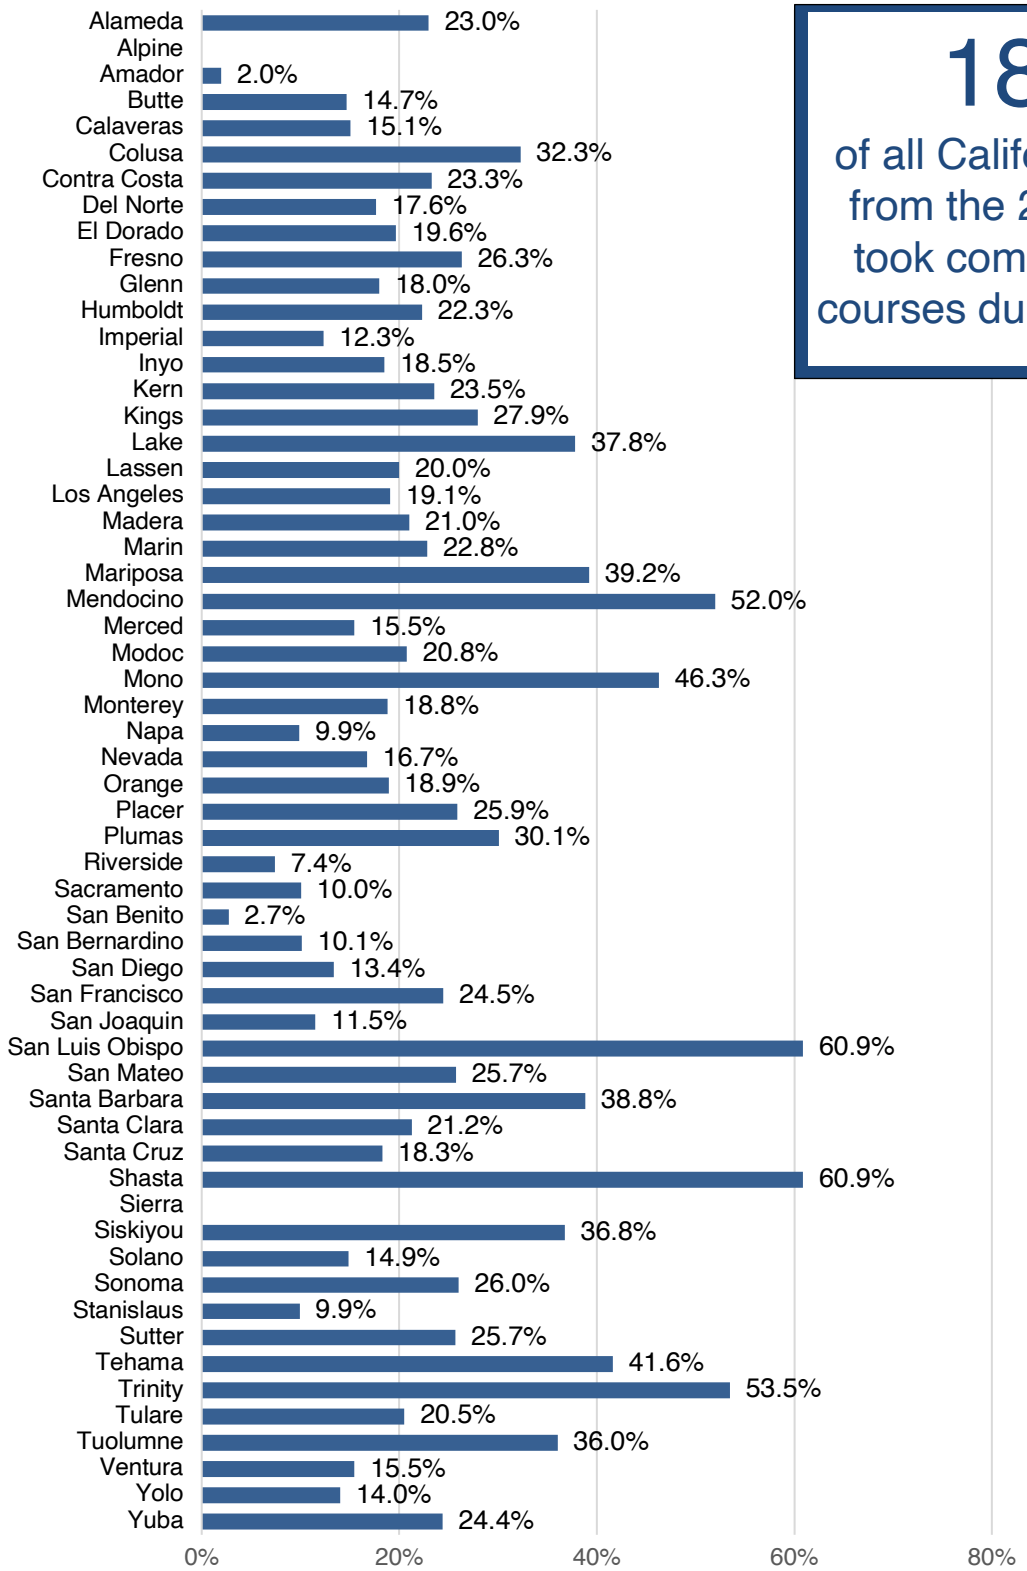
Data and Methods

Results presented in *A Rising Tide* and this appendix are drawn from two separate datasets:

- Student-level data, including individual demographic characteristics, from the California Department of Education's College/Career Indicator for the 2015-16 through the 2018-19 public high school graduating cohorts.
- Data from the California Community Colleges Chancellor's Office "special admit" populations of all high school students statewide who concurrently enroll in a community college between 2012 and 2019.

This analysis is unique in that it links administrative data from two education sectors, a rare opportunity given the absence of a statewide longitudinal data system. In this report we define dual enrollment broadly to include any California public high school graduate taking a community college course during their high school years. Still, enrollment rates reported here may undercount the full population of concurrently enrolled students for several reasons. First, we limited the sample of high school students to those included in the 4-year graduating cohort, excluding some students, such as those who may need a fifth year to graduate from high school. Second, we use a fuzzy match based on name and date of birth in each dataset, resulting in the removal of some high school students and community college special admits with missing data elements. In addition, the matched sample may differ from the full special admit population at the California Community Colleges because the full special admit population also includes students enrolled in private high schools or participating in home-schooling. Finally, it is important to note that while the bulk of dual enrollment in California happens through community colleges, some high school students may also enroll in courses at the California State University. They are not captured in this analysis. We also do not capture other means through which high school students complete college-level coursework, such as Advanced Placement (AP) or International Baccalaureate (IB) programs.

Dual Enrollment Participation by County, 2018-19 Graduate Cohort



18.2%

of all California graduates from the 2018-19 cohort took community college courses during high school.
