

# COMMUNITY SCIENCE SALON

APRIL 4  
3:30–5:00PM  
HUNT HALL 142

How does—or could—your work relate to the interests and concerns of local communities? What are the challenges and opportunities for university researchers who aim to collaborate with, and support community groups? The Center for Community and Citizen Science and the Center for Regional Change invite you to join an open discussion of these and other questions about Community Science.

We will be joined by Gwen Ottinger, Associate Professor at Drexel University and director of the Fair Tech Collective. Ottinger has studied community-led air monitoring in environmental justice communities since 2001, and is currently collaborating with Bay Area activists on a project that attempts to make monitoring data more useful in Environmental Justice organizing.

Come to listen, learn, and share your experiences in this open dialogue. Light refreshments will be provided.
